

Construction and Engineering Internship in New York!

We are a fully integrated real estate development, construction and management firm with a focus on developing, owning and operating first class residential and commercial real estate in the New York City Metro area. We are currently building, delivering, and designing low- and mixed-income housing under the "affordable NYC program", and have recently shepherded and completed projects through the NYC environmental voluntary cleanup program. Our multidisciplinary approach to real estate development, and expertise in navigating the multitude of city agencies and city, state and federal programs makes us unique in our ability to execute sophisticated projects typically undertaken by only the largest of national development firms.

Required Skills & Experience

- Graduated from or working towards a degree in Engineering, Structural Design, or Related Field.
- Strong interpersonal skills
- Excellent verbal & written communication skills

Highly-Desired Skills

- Independently capable of designing all types and sizes of structures
- Coordinate drawings with other disciplines
- Perform typical construction administration tasks like coordination meetings with contractors/clients and respond to RFIs
- Review shop drawings to be in conformance with the structural drawings and specifications
- Perform field observations and complete written reports of site observations
- Perform quality control checks of structural calculations, drawings and specifications of other engineers/Revit technicians' work
- Perform other duties as the supervisor may deem necessary
